EDUCATION

University at Buffalo (SUNY) — B.S. Computer Science | Graduated December 2025

Coursework: Data Structures, Algorithms & Complexity, Systems Programming, Computer Organization, Software Engineering Concepts, Software Project Management, Artificial Intelligence, Discrete Structures, Linear Algebra

TECHNICAL SKILLS

Languages: Java, C/C++, JavaScript/TypeScript, Python, SQL, PHP, HTML/CSS

Frameworks & Tools: React, Node.js, NestJS, FastAPI, Flask, Spring (familiar), PySpark, Pandas, Docker

Databases: PostgreSQL, MySQL, MongoDB | **Version Control:** Git, GitHub, Bitbucket (familiar) | **OS:** Linux, macOS, Windows

Practices: Agile/Scrum, CI/CD, OOP, REST API Design, Unit & Integration Testing, Technical Documentation

EXPERIENCE

Global Technology Intern – Data & Product Analytics – AXA XL | June – Aug 2024 | Stamford, CT

- Built and maintained ETL pipelines in PySpark and Azure Databricks to migrate large structured datasets from on-premises to cloud, writing maintainable code against defined specifications with data quality validation throughout
- Identified \$64M in miscategorized Gross Written Premium across 120 clients through systematic data analysis; documented findings and presented corrective recommendations to international engineering and finance stakeholders
- Contributed to PaaS invoicing automation solution, translating user requirements into backend exception handling logic and participating in iterative development and testing cycles

Teaching Assistant – CSE 420 – University at Buffalo | Aug – Dec 2025 | Buffalo, NY

- Supported 61 students in an applied software development course, guiding iterative development cycles, debugging strategies, and technical documentation practices across 10+ student teams

Software Engineering Fellow – Headstarter AI | June – July 2023 | Remote

- Built 3 full-stack web applications in Java-adjacent React/Node.js/Flask stack in Agile team environments, including a resume parser with keyword matching and an ML-based content recommendation platform
- Practiced sprint planning, daily standups, and iterative delivery using structured engineering curriculum; integrated OpenAI and HuggingFace NLP models into production applications

LEADERSHIP

Founder & President – UB Mobile App Development Club – University at Buffalo | Jan 2023 – Dec 2025 | Buffalo, NY

- Founded and scaled a 250+ member technical community; led workshops on software engineering practices, OOP design patterns, version control, and Agile collaboration

PROJECTS

Self-Funded Health Plan Admin Dashboard — *TypeScript, NestJS, PostgreSQL, React, OpenAI, Docker, JWT*

- Designed production full-stack application with OOP-based NestJS service architecture, REST API layer, JWT authentication, and role-based access control enforced at both application and database levels
- Implemented PostgreSQL row-level security policies and audit logging triggers to ensure sensitive data access was restricted, traceable, and compliant with defined access specifications
- Integrated OpenAI API to surface plain-language benefit explanations without exposing raw policy data; wrote unit and integration tests for all endpoints and security policies
- Containerized with Docker and deployed via GitHub Actions CI/CD pipeline; maintained API specs, schema documentation, and operational runbook throughout

Federal Budget Analytics Dashboard — *Python, FastAPI, PostgreSQL, React, TypeScript, GitHub Actions*

- Built end-to-end data pipeline ingesting 5,800+ U.S. Treasury API records with Python/Pandas ETL, PostgreSQL backend with 10+ normalized tables, indexes, triggers, and stored procedures
- Designed and implemented REST APIs in FastAPI for cash balances, deficit tracking, and time-series financial metrics; automated data cleaning and validation pipeline to ensure output accuracy
- Set up automated CI/CD via GitHub Actions for testing and deployment across environments; documented all API contracts, data schemas, and pipeline logic for team reference

BuffaLiving – Student Housing Platform — *React, Next.js, PostgreSQL, PHP, JavaScript*

- Architected and shipped a consumer-facing full-stack web application reaching 100+ active users, built with Next.js for server-side rendering, PHP backend, and PostgreSQL for structured data storage
- Implemented user authentication with scoped data access controls, real-time chat, and map-based property search; debugged and resolved production issues reported by live users
- Iterated on UI/UX through usability testing sessions, identifying and resolving friction points in the listing discovery flow to improve engagement and time-on-site metrics
